

Turftak[®]

Artificial Turf Adhesives

The Turftak range includes a selection of solvent-free, polyurethane adhesives for use in the installation of artificial turf.

The Turftak range features a selection of solvent-free, polyurethane adhesives for use in the installation of artificial turf and provides users with versatile, reliable, and easy to use options for bonding a variety of substrates and joining tapes both outdoors, and in more sensitive indoor environments.

Benefits of the Turftak range include excellent bond strength, high initial tack, superior shock absorption and fast setting times that work in a variety of environments.

Turftak 1 One Component Adhesive

Turftak 1 provides a permanent bond strength, retains flexibility, and requires no mixing for ease of application. The adhesive exhibits a thixotropic nature which helps to gap fill slight voids between substrates whilst remaining easy to apply with a notched trowel.

Turftak 2 Two Component Adhesive

Turftak 2 provides a strong, permanent bond while remaining flexible enough to excel in impact resistance, making it ideal for high foot traffic. The adhesive consists of a paste and fluid hardener which, when mixed creates a uniform green colour and can be easily applied with a notched trowel.

Quiadsa MS One Component SMP Adhesive

Quiadsa MS is an innovative moisture cure SMP (silane-modified polymer) adhesive available in easy to use cartridge form and is ideal for smaller installations and repairs where less adhesive is required, meaning waste is reduced to a minimum.

Turftak Features:

- ✓ Excellent bond strength
- ✓ High resistance to weathering
- ✓ Fast setting times
- ✓ Green in colour
