

DuoDek-S One Gun (Wall Mounted) EM3021

The DuoDek-S wall mounted system is a two component water-based system designed for supplying adhesive to 1 spray gun.

The system comprises of:

- Walther Pilot Bond 2K spray gun - Specially developed for applying 2K water-based adhesives
- 5 metre flexible hose set(s) for spray guns
- ½" polypropylene, double diaphragm pump for the adhesive
- ¼" polypropylene double diaphragm pump for the activator
- Flow meter c/w fittings
- Activator filter (10 micron)

The two double diaphragm pumps are wall mounted and located adjacent to the adhesive and activator containers. Adhesive and activator are drawn from their original containers via suction tubes to the diaphragm pumps.

The adhesive is pumped through a pulsation dampener terminating with a ball valve, while the activator is pumped through a 10-micron high capacity filter before being fed through a flow meter to precisely control activator flow. The adhesives and activator are then fed through a 5-metre flexible hose to the hand spray gun.

Part A

- EM10015 - 25 kilo Suction Tube (Poly Drum)
- EM10016 - 200 kilo Suction Tube (Poly Drum)
- EM10017 - 220 kilo Suction Tube (Open Top Drum) - 1100 kilo Suction Tube (IBC)

Part B

- EM10018 - 20 kilo Suction Tube (Poly Drum)
- EM10019 - 200 kilo Suction Tube (Poly Drum)
- EM10020 - 220 kilo Suction Tube (Open Top Drum) - 1100 kilo Suction Tube (IBC)
