

SOLFRE1

Rake System (1.5-2ltr/Min)

EM1090 Equipment Description

- The one-component adhesive is gravity fed from either I.B.C's or drums and the components are fed to a metering unit that controls the output.

Metering Unit

- The metering unit includes a Kracht gear pump which is driven directly from a motor gearbox.
- The pump has been specifically developed for moisture sensitive as well as aggressive materials and incorporates a double lip seal / wet seal arrangement.

Control Panel

- A speed dial is mounted onto the control panel for required adhesive output.

Dispense Assembly

- The head works off a trigger that controls the flow of component, which is then dispensed to a 600mm rake head directly onto the panel. After the adhesive has been dispensed, the rake head is submerged in an oil reservoir to keep the system air tight.

Available Connectors

Connector for IBC - EM1061

- Includes connector, adapter, 4 metre hose, plug and cap
- x1 set required for use with EM1090

Connector for Drum - EM1076

- Includes connector, 3 metre hose, plug and cap
- x1 set required for use with EM1090
